Cell (biology) - Wikipedia Cell (biology) The cell (from Latin cella, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life that can replicate independently, and cells are often called the "building blocks of life". The study of cells is called cell biology. What is a cell? - Genetics Home Reference - NIH Cells are the basic building blocks of all living things. The human body is composed of trillions of cells. They provide structure for the body, take in nutrients from food, convert those nutrients into energy, and carry out specialized functions. Cell (novel) - Wikipedia Cell is an apocalyptic horror novel by American author Stephen King, published in 2006. The story follows a New England artist struggling to reunite with his young son after a mysterious signal broadcast over the global cell phone network turns the majority of his fellow humans into mindless vicious animals.

The Cell (2000) - IMDb What makes watching and reviewing films a pleasure is when every once in a while when you least expect it a film like The Cell comes along and knocks your socks off. The Cell - Wikipedia The Cell is a 2000 science fiction horror film directed by Tarsem Singh in his directorial debut, and starring Jennifer Lopez, Vince Vaughn, and Vincent D'Onofrio. cell | Definition, Types, & Functions | Britannica.com Cell, in biology, the basic membrane-bound unit that contains the fundamental molecules of life and of which all living things are composed. A single cell is often a complete organism in itself, such as a bacterium or yeast.
